# Our Team

---

We are a team from Discovery High School located in Camas, WA. Our team is made up of two seniors, a junior, a sophomore, and a freshman. Every individual contributes a different viewpoint and set of abilities.

*Aubrey, Sophie, Beau, Zac, & Jasmine*

# SITE & LOCATION

Our site is right next to Round Lake and in the heart of our community. near Liberty Middle School. When deciding on location we wanted to incorporate environment, community, and opportunity into our decision. Our site may take up some of the trail space, but provides many opportunities for students and the community that other locations would not. This site allows for a lot of unique project opportunities within the environment. The site is close to other schools and the community downtown area, allowing our building to be used for different events both collaboratively with other schools and as well as outside of school hours.

# LAKE BENEFITS

---

One of the focal points of our school is the lake that sits beside our school. Round Lake was one of the main reasons we chose our site location. The lake is accessible to the students which allows for many unique STEAM-based science projects. Multiple studies from The Great Lake Stewardship Initiative prove that being outdoors benefits students greatly. The study showed increased awareness, creativity, and innovativeness. This would give us an advantage over other schools, as a projects-based STEAM school.

# SURVEY DATA

---

We sent out a survey to all the students and staff at Discovery High School, we got 50+ responses. Here are a few answers that helped influence our design!

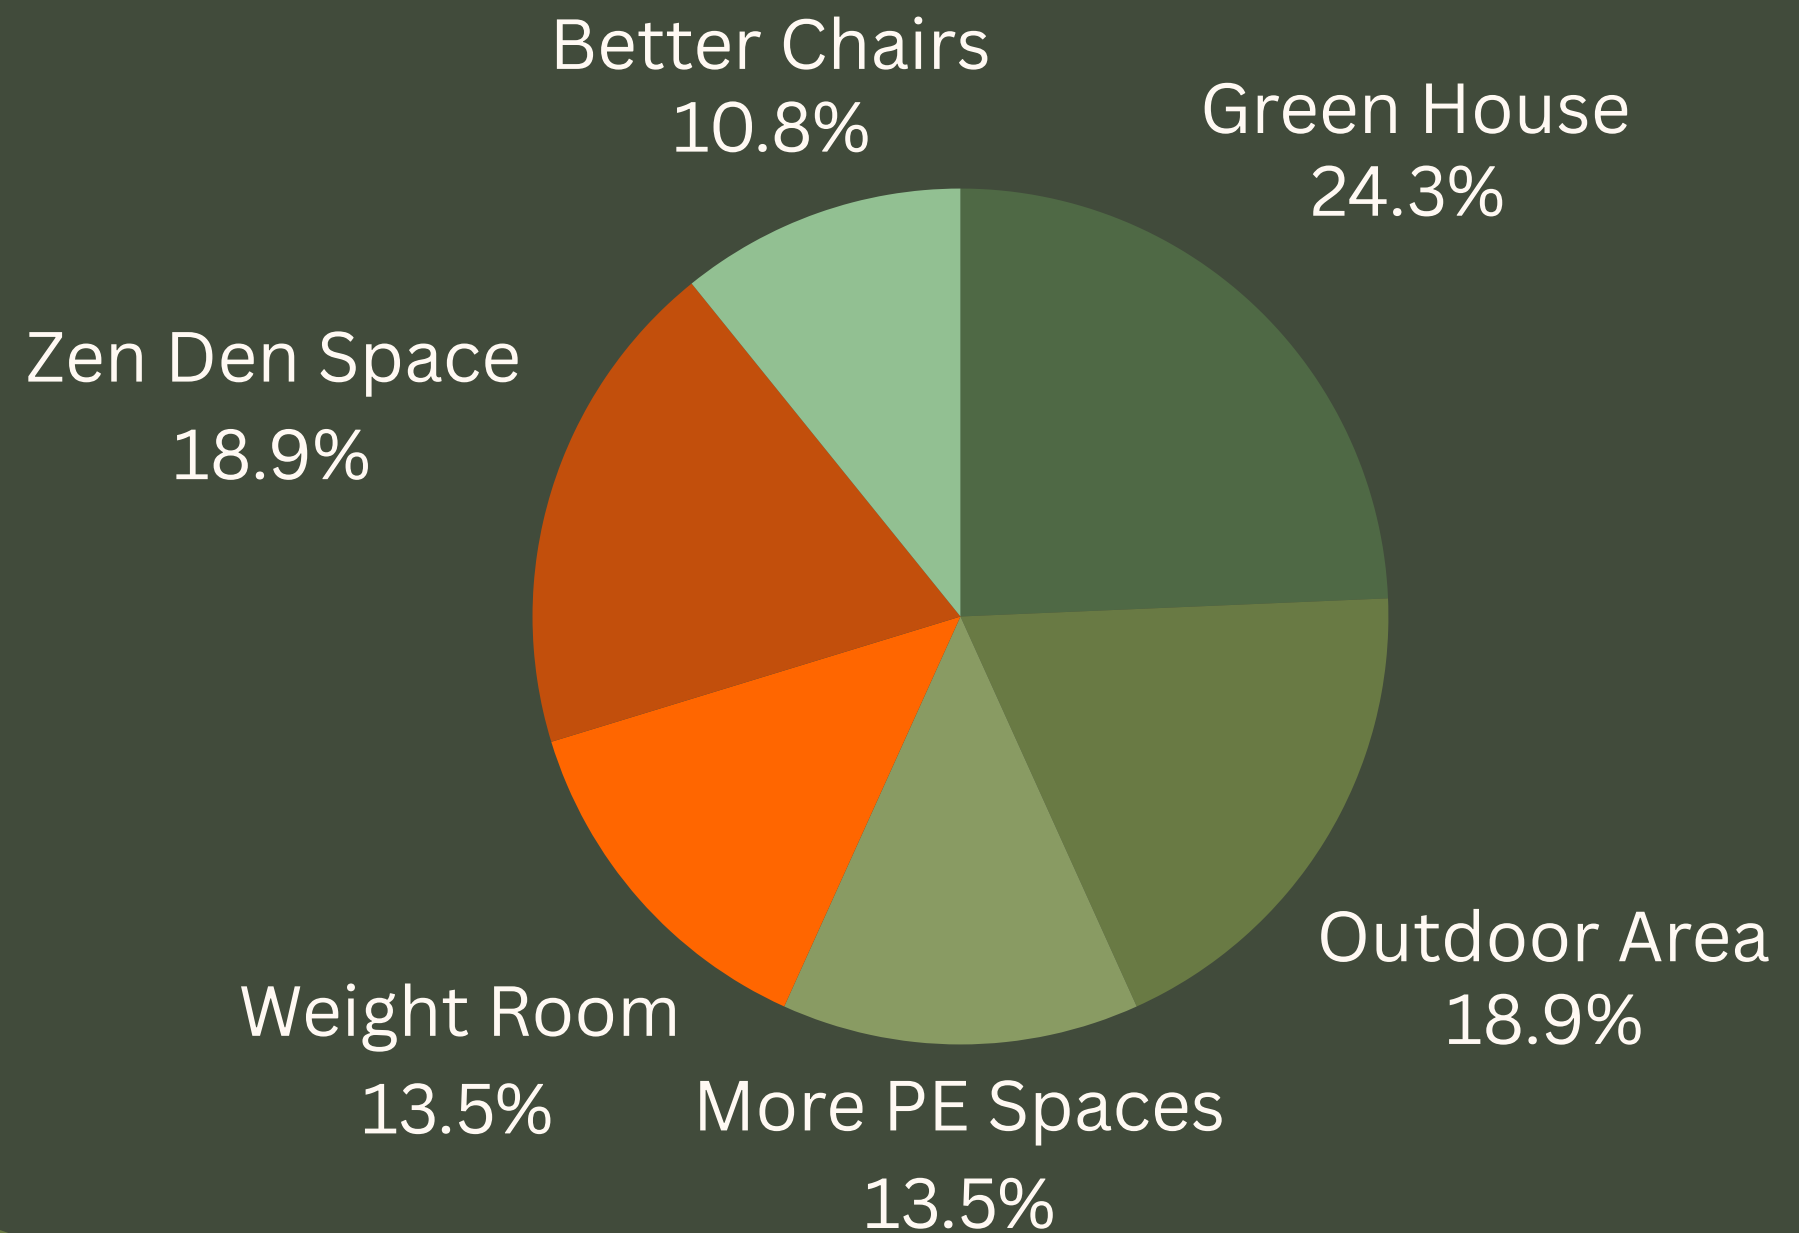

---

# SURVEY DATA

If you could add any features to this school what would it be? Why?

There was an overwhelming amount of responses requesting more outdoor space/activities and more exercise elements

# Community benefits

Because of our school's previously mentioned unique location, we knew we wanted to give back to our community. Our school also functions as a public space after hours. This will help in building longevity in helping community members who don't have students going to schools feel like they are getting benefits from their money. Various community organizations like the Rotary Club, the downtown association, and the Community Chest have mentioned how beneficial access to our spaces would be.

# The Amenities

Rooftop Track

Library

# *Environmental Contribution*

---

A majority of the structure of our school will be made out of Cross-laminated timber. Cross-laminated timber is better for the environment because it removes all the carbon that goes into making steel. We will also be taking advantage of solar panels on parts of the roof of the building. This will reduce energy costs, reduce pollution, and it will showcase the use of solar panels to the community. Every dollar counts, especially when it comes to schools, and the savings from solar panels will allow us to put more money each year into our students and our community.

# Sustainability

Solar Energy

Energy-Efficient  
Design

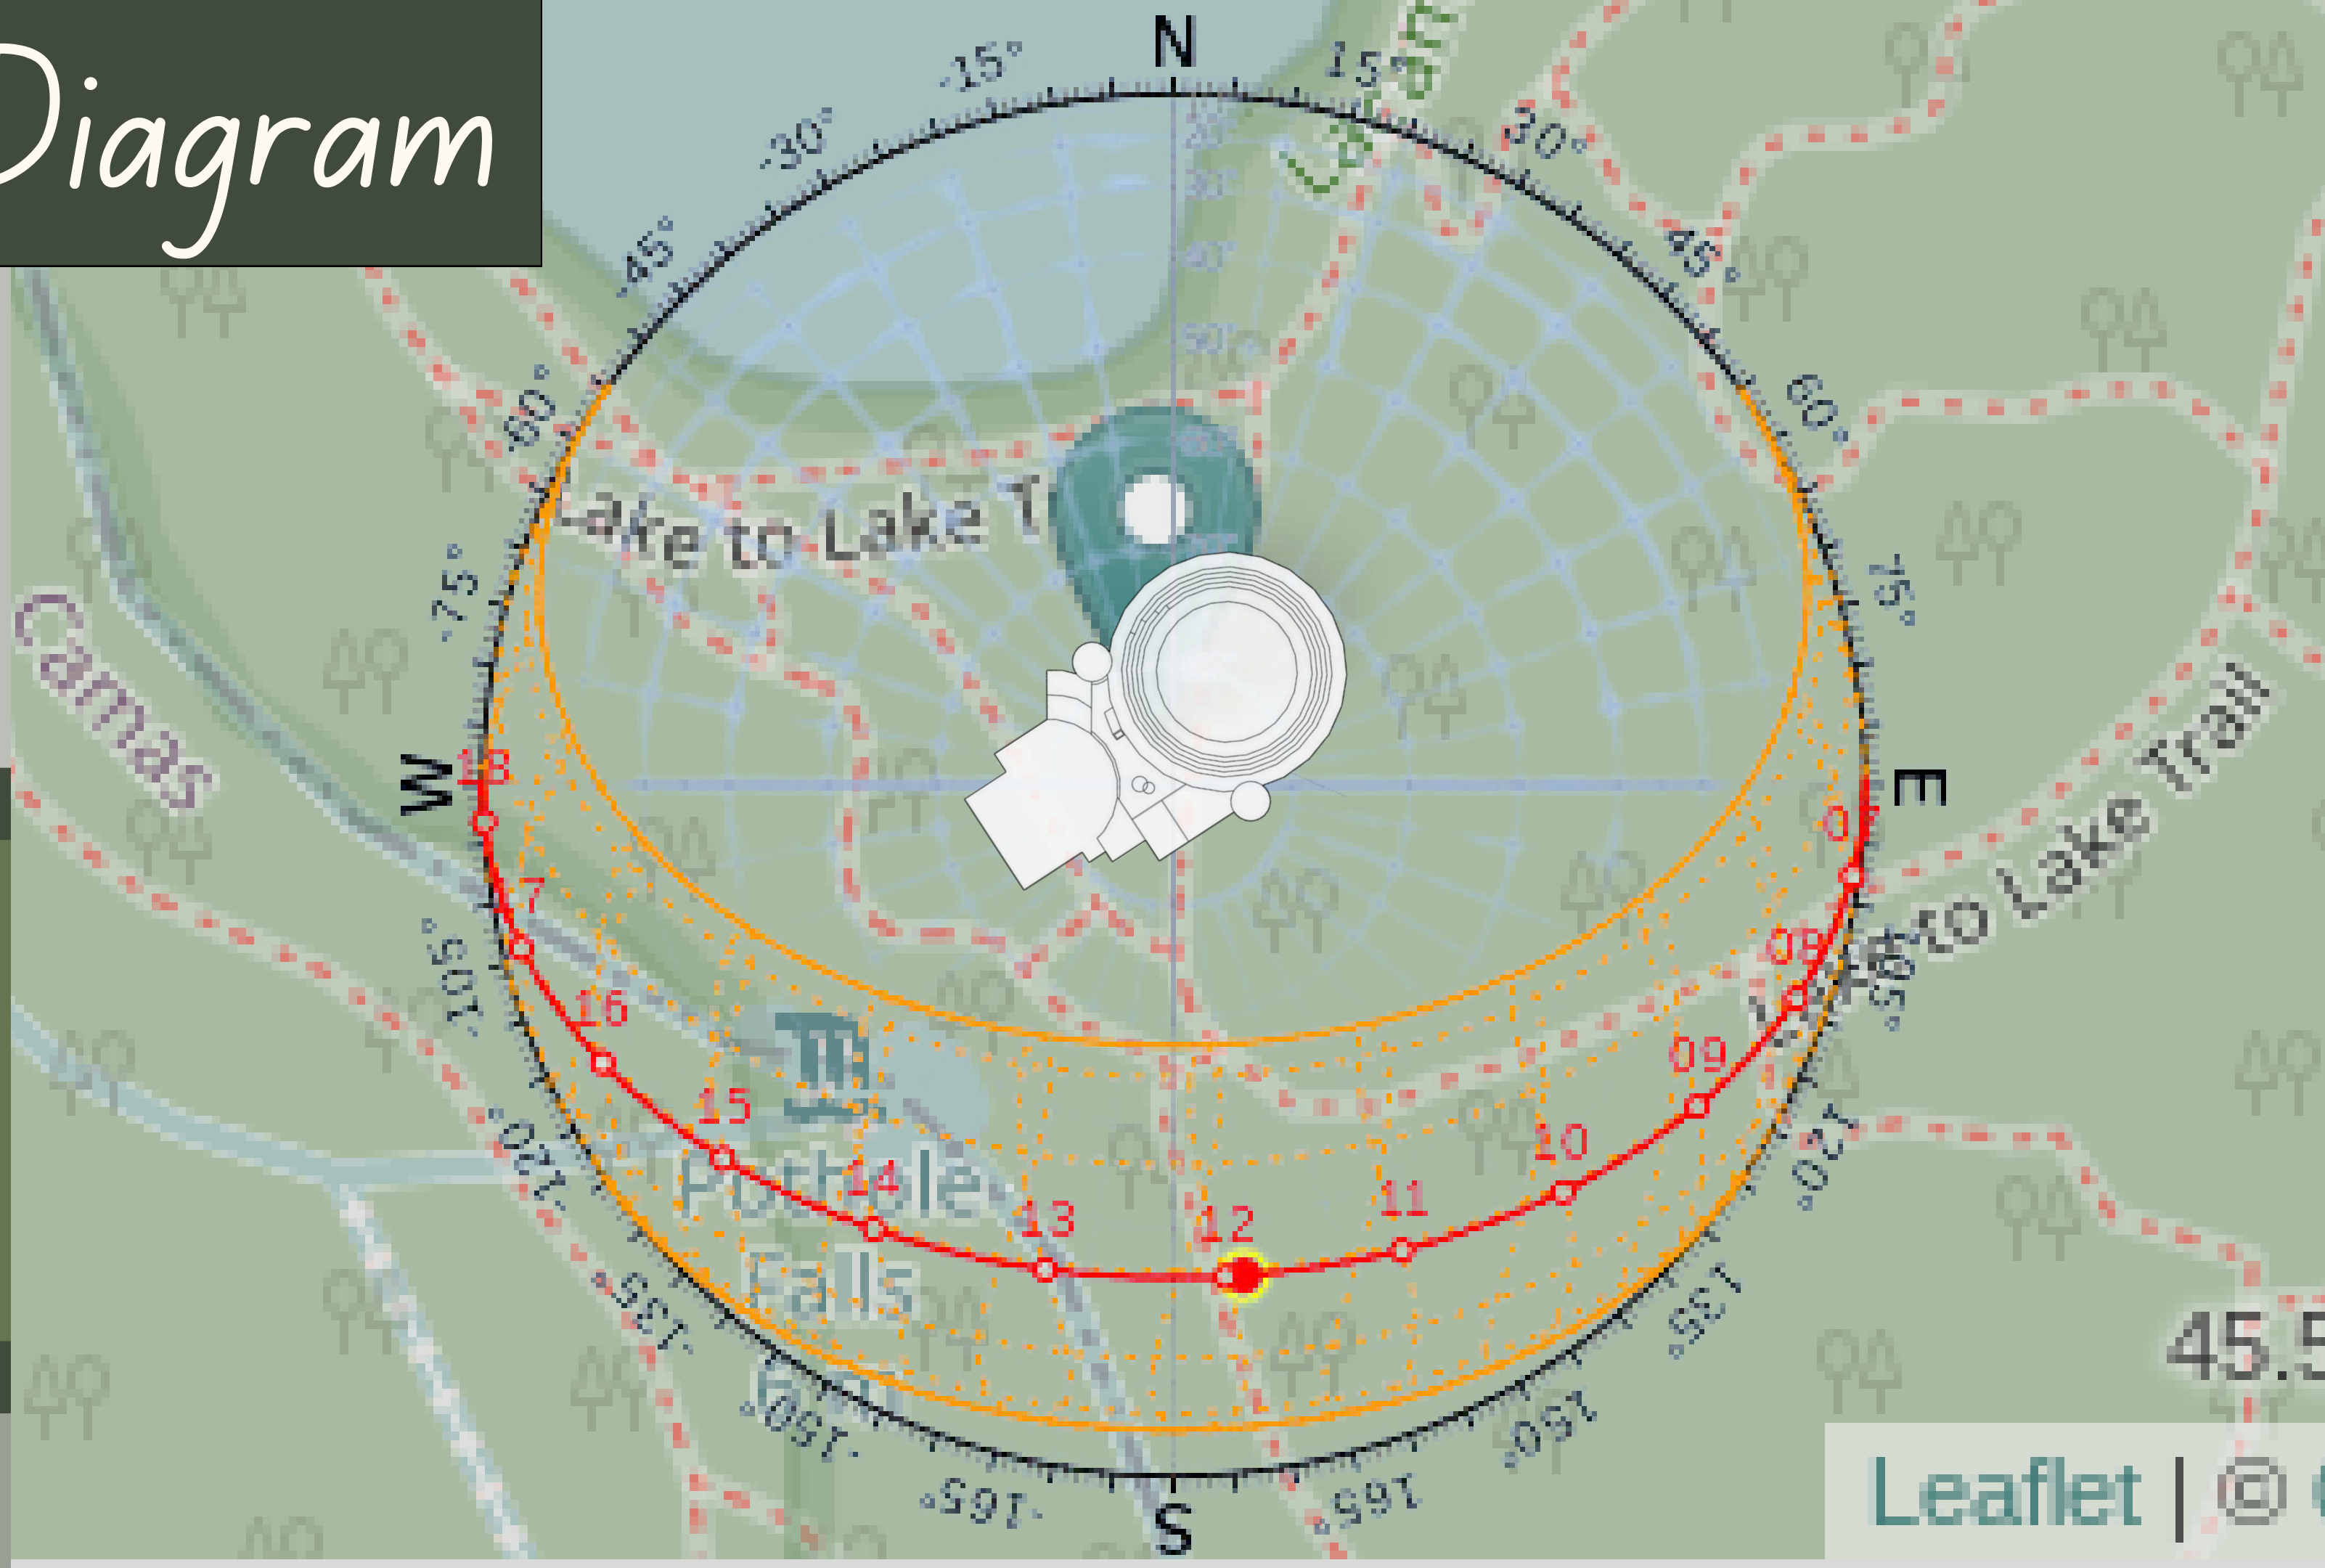

Water Use  
Reduction

Green Space  
Integration

# Solar Diagram

# Green House

---

School greenhouses equip students with conservation, ecological knowledge, and values they will use long after they graduate. This will help continue to connect our students to nature even when it's raining. It's also a great hands-on learning project as well as will help teach students about responsibility.

# Transportation

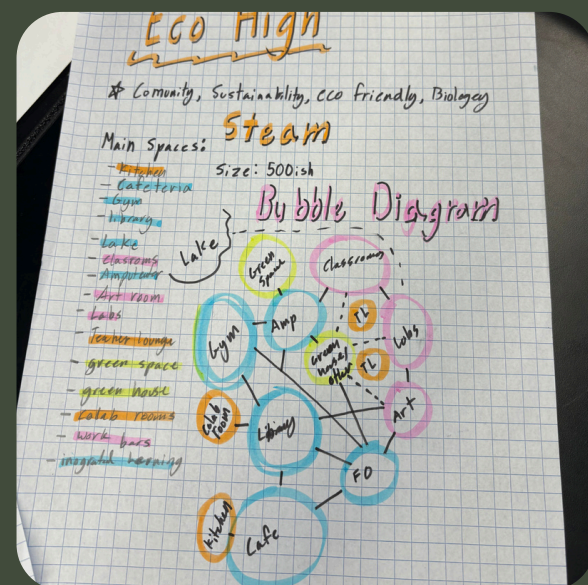

We will be relocating the former bus barn to a new property. Students will continue to use the same buses as other Camas schools, with some students driving for themselves or their parents. The former bus barn will also feature a parking lot, reducing paving and ecological damage. A unique feature will be introduced: a gondola, which will travel through the forest and serve as a means of transportation for some students to ECO High. A gondola puts out zero emissions versus cars that emit a large amount of pollution. As the gondolas are only in motion when guests are there to be transported, unnecessary energy-consuming empty trips can be avoided. This move will provide an exciting and unique learning experience for students in Camas.

# *Inspiration Pictures*

Upon seeing these two designs, we wanted to implement their ideas into our design. The first image takes advantage of open space and natural light to create a beautiful warm and welcoming workspace. The second has the same use of open space and natural light but this one is scattered with plants that can help connect a bit more with nature in an indoor environment.

# *Inspiration Pictures*

# BE A MONARCH

Our school mascot is a monarch butterfly, they are commonly found here in Washington forests. The monarch butterfly stands for transformation, resilience, unity, and connection. It also demonstrates the student's ability to fly above expectations. Our color scheme which you can see included the token orange of the monarch butterfly.

# Special Guests

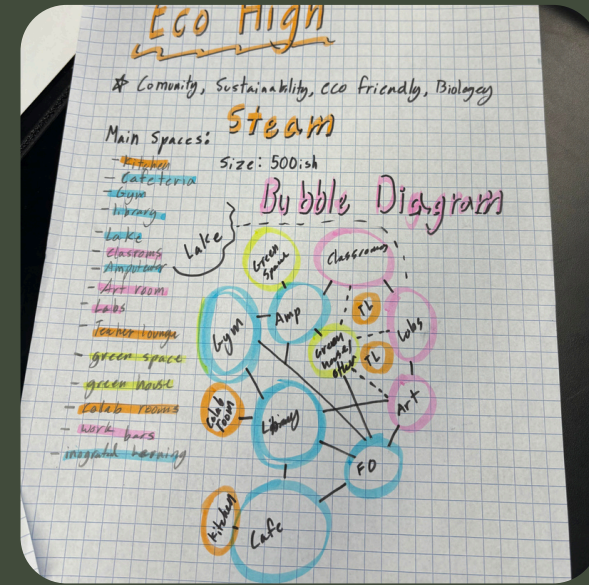

During our design process, we had the opportunity to meet with several professionals. First, we met with a civil engineer who discussed rainwater and site requirements. Then we also met with an HVAC and electrical engineer. We took all the info we learned and applied it to our site-building. It was so interesting to work with a civil engineer to learn about the bioswales and rainwater collection on our site as we are right next to a lake. We also had the chance to work with a professional architect throughout our whole design process.

# CORE CLASSROOMS

## UNIQUE FEATURES

The hexagon tables allow for many different table shapes and maximizes collaboration

# CORE CLASSROOMS

## UNIQUE FEATURES

Many classrooms have different areas so they can change up their learning space

Whiteboard walls are one of the main features of our school, It is an amazing learning tool and is excellent for math/planning work

Students can choose alternative seating spaces depending on what works for them

There is storage in every classroom and especially more in science labs

All classes have an outdoor view to their unique surroundings
