

A4LE REGIONAL CONFERENCE 2018 SCHOOL TOURS FRIDAY, MAY 4TH

DOWNTOWN TOUR

9:15 AM – 9:45 AM

Northwest School

1415 Summit Avenue

(12 min walk **uphill** *a big hill – You will have a spot on the bus for the remainder of the tour.)

Mithun | New Construction

This new building is a catalyst project for the Northwest School, enriching its urban campus and consolidating programs that were previously distributed across the neighborhood. Ter variegated façade echoes the signature yellow clapboards of the adjacent historic Summit School building. An overlaid fenestration pattern is inspired by wavelengths to celebrate the school's art and science focused curriculum.

Sustainability is integrated throughout, from native plantings to the interactive energy and water performance dashboard, and rooftop solar hot water array. *(Photo credit: Mithun)*

10:05 AM – 10:35 AM

Seattle World School

1700 East Union Street

TCF | Modernization and Addition

Seattle World School is a 6 – 12 school in the Seattle School District. Its design speaks an international language of welcome to recently immigrated learners. The school serves as a hub that surrounds students with supportive staff, outside partners, and the educational resources to prepare for graduation, and transition into traditional high school or enter a trade program. An increase in square footage gains a glass portico entry, multi-purpose room and administration, while

renovation scope updates learning spaces, increases safety and envelope efficiency, and allocates use for compatible non-profits. *(Photo credit: Eckert and Eckert Photography)*

11:00 AM – 11:40 AM

Lemieux Library

Seattle University Campus (near 12th Avenue & East Columbia)

Mithun with Pfeiffer Partners | Modernization and Addition

Built in 1964, Lemieux Library was an uninviting repository for books that lacked modern technology and functionality. The design reinvents this campus landmark by pairing a sensitive renewal of the historic structure with the addition of a light-filled learning commons, restoring the library's central role on campus. The learning commons enhances connections between the library and adjacent buildings, improving pedestrian flow and defining a new plaza at the center

campus. The building is LEED Gold certified. *(Photo credit: Doug Scott Photography)*

12:05 PM – 12:35 PM

Summit Sierra Charter School

1025 South King Street

NAC | Adaptive Reuse and Addition

Summit Sierra is an adaptive reuse and addition to an existing pre-engineered metal building. A new two-story, 5,500 SF addition was constructed for expanded teaching space. The school design reflects Summit Public Schools' teaching philosophy of student-led, inquiry-based learning. Large open instructional areas adjoin STEM and seminar rooms to foster collaborative teaching and learning.

These spaces are connected with glass interior garage doors, providing transparency and openness for a variety of educational activities. Working within a very tight budget, the design provides an exciting environment that embraces a next generation learning model. *(Photo credit: Ben Benschneider Photography)*

After the tours, meet up at **Optimism Brewing Company 1158 Broadway** for nosh and craft brew!
