

Colorado Skies Academy is a new Charter School for grades 6–8, located on the site of the Centennial Airport campus. The one-story, 22,300-square-foot facility will also be affiliated with the adjacent Wings Over the Rockies Exploration of Flight Museum housing vintage military aircraft and traveling exhibits.

The project-based learning/STEM curriculum will be flight-based, teaching students many different facets of aviation from the science and art of flight to airport operations. The Spread Your Wings program will fly in teachers to Colorado's front range for exposure to the program and as professional development and, in turn, introduce elementary students to Colorado Skies Academy.
