SUMMIT DESIGN AWARD – RENOVATION
Thornton, Colorado

The renovation of FutureForward at Bollman and construction of FutureForward at Washington Square greatly expands CTE opportunities for Adams 12 Five Start School District’s students.

At Bollman, extensive renovations were made to the auto shop. Various supporting renovations were also made to the medical science, graphic arts, video production, and computer science programs. The new design also features specific teacher collaboration spaces and a new commons area for more casual interaction between students and teachers. Accessibility was improved throughout the facility so that all students may have equal opportunities to learn.

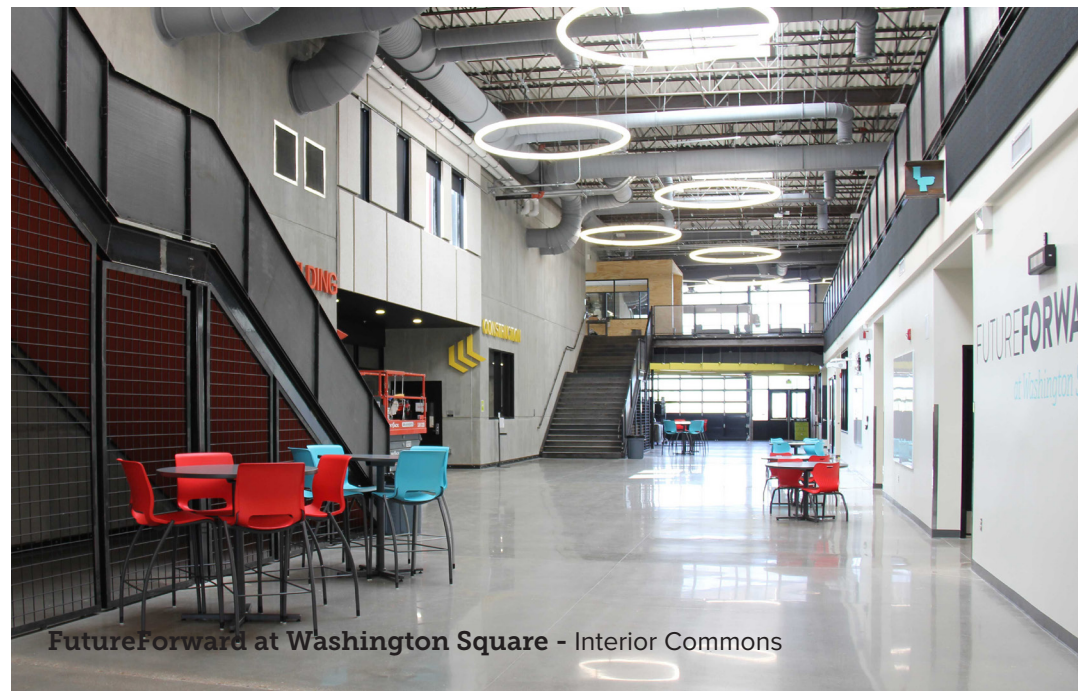

The new FutureForward at Washington Square offers both current and new CTE programs. The programs include advanced diesel mechanics, construction trades, welding, Emergency Medical Technician (EMT) training, criminal justice, forensic science, and fire science.
